RESUME ATS SCORE CHECKER

The Problem

-  75% of resumes get rejected by ATS before a human even sees them
-  Job seekers don't know *why* their resume fails
-  No instant way to check compatibility with job descriptions

Our Solution

-  A simple desktop app to test resume–JD match
-  Real-time ATS score (0–100%)
-  Color-coded feedback (Red / Yellow / Green) for quick understanding
-  Helps users optimize resumes instantly

PROPOSED SOLUTION:

Our Simple Solution

Lightweight Java Swing App

Built using **Swing + AWT** (no libraries)

Fully OOP-based design

How It Works (Based on Our Code)

Paste **Resume** into left box

Paste **Job Description (JD)** into right box

Click **“Scan”** button

What the App Does

Converts text to **lowercase**

Splits JD into **individual words**

Checks how many words appear in the resume

Calculates a **simple keyword-match ATS score**

System Architecture

Components Used

Java

Swing (GUI)

AWT (Layouts + Events)

OOP Concepts

No External Libraries

Modules

Resume Panel

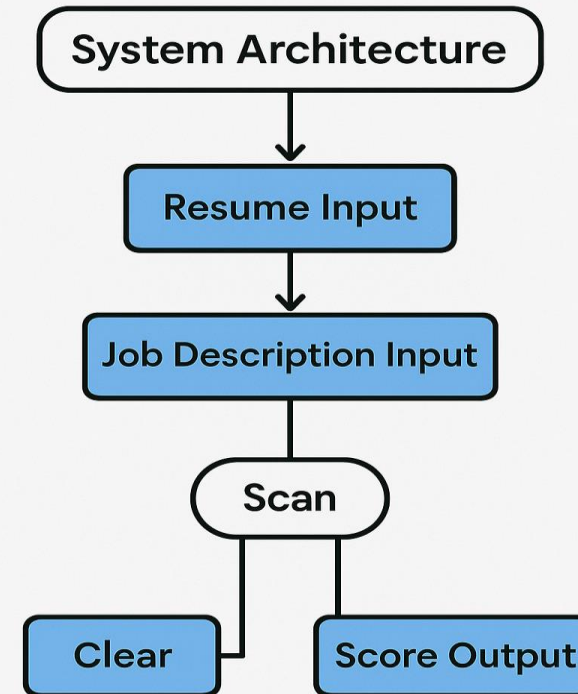

Job Description Panel

Scan & Clear Buttons

Score Display Panel

WORKING PRINCIPLE:

Score Calculation

Convert both texts to lowercase

Split JD into words

Count how many JD words appear in the resume

Score = (matched ÷ total words) × 100

Colour Indicator

 **Red** → Score < 50%

 **Yellow** → Score = 75%

 **Green** → Score ≥ 50% (except 75%)

Technologies used:

✓ Technologies Used

1. Java Programming Language

- Core Java
- Object-Oriented Programming

2. Java Swing (GUI Framework)

JFrame, JPanel, JButton, JLabel, JTextArea, JScrollPane

3. Java AWT (Abstract Window Toolkit)

Color, Font, BorderLayout, GridLayout

Used to detect button clicks

5. Java String Functions

- toLowerCase()
- contains()
- split() — used for keyword matching

✓ OOP Concepts Used

1. Class & Object

sampleats3 = class

new sampleats3() = creates GUI

2. Inheritance

extends JFrame..Gets window features

3. Interface

implements ActionListener

Must override actionPerformed()

4. Encapsulation

Private GUI variables

Used only inside class

5. Polymorphism

One actionPerformed()

GUI WINDOW DESING WITH AWT & SWING

Layout System (Made Simple)

 **BorderLayout** → Divides the window into
Top / Center / Bottom

 **GridLayout** → Splits the center into **two equal sections** (left & right)

What the Screen Looks Like

 **Left Panel** →  Resume Text Area

 **Right Panel** →  Job Description Text Area

 **Bottom Panel** →  Big Score Box + Buttons

Why We Used ScrollPane

 **scroll** long resume text

 Makes text easy to read

 Professional UI experience

Visual Feedback (Colour-Based Score)

 **Red** → Score **below 50%**

 **Yellow** → Score **exactly 75%**

 **Green** → Score **above 75%**

Easy for anyone to understand the resume strength at one glance!

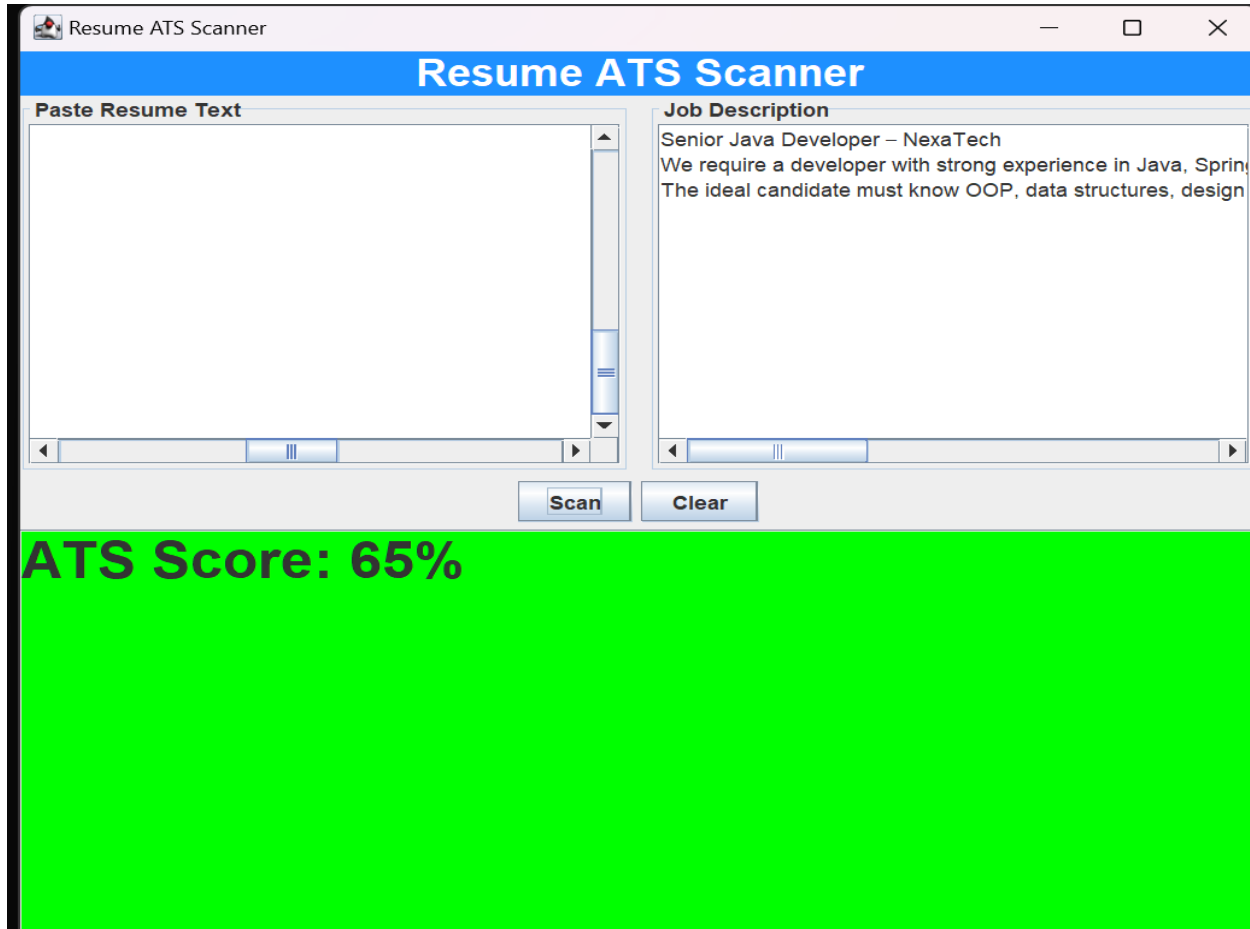

Font & UI Choices

 Large, bold score text → easy to notice

 Clean panel structure → resume & JD side-by-side

 Buttons placed at the bottom → user-friendly flow

OUTPUT DEMOS:

The image shows a screenshot of a web application titled "Resume ATS Scanner". The application has a blue header bar with the title. Below the header, there are two main text input areas. The left area is labeled "Paste Resume Text" and is currently empty. The right area is labeled "Job Description" and contains the following text: "Senior Java Developer – NexaTech", "We require a developer with strong experience in Java, Spring", and "The ideal candidate must know OOP, data structures, design". Below these input areas, there are two buttons: "Scan" and "Clear". At the bottom of the application, there is a large green banner with the text "ATS Score: 65%" in bold black font.

ATS Score: 10%

Resume ATS Scanner

Resume ATS Scanner

Paste Resume Text

SQL and mySQL
- Swing GUI
- JDBC
- Problem Solving
- Debugging
EXPERIENCE
Junior Java Developer | Tech Solutions Inc. | Jan 2022 - P
- Developed Java applications
- Implemented OOP principles
- Worked with SQL databases

Job Description

java sql oop python

Scan

Clear

ATS Score: 75%

CONCLUSION:

★ **Why We Chose This Project**

- 🎯 Helps students check resume strength
- 🧠 Very useful but easy to understand
- 💻 Shows our skills in Java, Swing, AWT, and OOP
- ⚡ Fast, lightweight, no extra libraries
- 👁️ Clear colour-based score display
- 🧪 Good practice for GUI, events, and text handling

★ **Why This Approach?**

- 🔍 Simple keyword matching = easy & effective
- 🧩 Works perfectly with basic Java (no AI needed)
- ⚙️ Easy to build, test, and explain
- 🚀 Clean, efficient, and beginner-friendly
